

## Microbiome Information for: membranous nephropathy

### For prescribing Medical professionals Review

The suggestions below are based on an Expert System (Artificial Intelligence) modelled after the MYCIN Expert System produced at Stanford University School of Medicine in 1972. The system uses over 1,800,000 facts with backward chaining to sources of information. The typical sources are studies published on the US National Library of Medicine.

Many recent studies have found that symptoms and symptom severity has strong associations to the microbiome for many conditions. Correcting the microbiome dysfunction is believed to reduce the severity of symptoms. In some cases, this correction may cause symptoms to disappear.

These are *a priori* suggestions that are predicted to independently reduce microbiome dysfunction. Suggestions should only be done after a review by a medical professional factoring in patient's conditions, allergies and other issues.

**This report may be freely shared by a patient to their medical professionals**

---

Best practise for making microbiome adjustments is to obtain the individuals microbiome. The following are the best microbiome to use with this expert system model. The suggestions below are intended as temporary suggestions until a test result is received.

## Bacteria being reported because of atypical values.

These bacteria were reported atypical in studies of membranous nephropathy

*Nota Bena:* Many studies are done with a small sample size or mixtures of condition subsets which can greatly diminish the ability to detect bacteria shifts.

### Bacteria Name Rank Shift Taxonomy ID

Alloprevotella	genus	High	1283313
Granulicatella	genus	High	117563

### Bacteria Name Rank Shift Taxonomy ID

Prevotella	genus	High	838
Streptococcus	genus	High	1301
Treponema pallidum	species	High	160

## Substance to Consider Adding or Taking

These are the most significant substances that are likely to improve the microbiome dysfunction. Dosages are based on the dosages used in clinical studies. For more information see: <https://microbiomeprescription.com/library/dosages>. These are provided as examples only

Colors indicates the type of substance: i.e. probiotics and prebiotics, herbs and spices, etc. There is no further meaning to them.

Antibiotics annotated with [CFS] have been used with various degree of success with Myalgic Encephalomyelitis, Chronic Fatigue Syndrome, Chronic Lyme, Chronic Q-Fever and Long COVID conditions. Rotation of antibiotics with 3 weeks off between courses is recommended.

## Substance to Consider Reducing or Eliminating

These are the most significant substances have been identified as probably contributing to the microbiome dysfunction.

In some cases blood work may show low levels of some vitamins, etc. listed below. This may be due to greedy bacteria reported at a high level above. Viewing bacteria data on the Kyoto Encyclopedia of Genes and Genomes (<https://www.kegg.jp/>) may provide better insight on the course of action to take.

(2->1)-beta-D-fructofuranan {Inulin}	Honey {Honey }
2,3-dihydroxypropyl dodecanoate {Monolaurin}	imipenem
allium sativum {garlic}	Menta × piperita {peppermint}
amoxicillin [CFS]	Mentha spicata {Spearmint}
ampicillin [CFS]	meropenem
Ayurvedic herbal formula {Triphala}	Metha family {Mint}
Azadirachta indica {Neem}	minocycline [CFS]
benzylpenicillin sodium (antibiotic)	nicotinic acid {Vitamin B-3}
chlorhexidine	Olea europaea {Olive leaf}
Cichorium intybus {Chicory}	piperacillin-tazobactam
Cinnamomum zeylanicum {Ceylon Cinnamon}	Pistacia lentiscus {mastic gum}
ciprofloxacin [CFS]	Propolis {Bee glue}
clindamycin [CFS]	rosmarinus officinalis {rosemary}
doxycycline [CFS]	soy
fluoroquinolone	Thymus vulgaris {thyme}
gentamicin	tobramycin
high red meat	vancomycin (antibiotic)[CFS]
	Zingiber officinale Roscoe {ginger}

## Sample of Literature Used

The following are the most significant of the studies used to generate these suggestions.

### Syphilis-related Membranous Nephropathy in a 35-year-old Woman.
